

Christian Abbot

562-551-4719 | coabbot@cpp.edu | www.cabbot.dev | linkedin.com/in/tivvn | github.com/tivnn

Computer Science student building AI-assisted applications, data-driven systems, and product-focused software

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL

AI/ML: Generative AI APIs, prompt engineering, model evaluation concepts, RAG concepts, data labeling workflows

Web/Tools: React, Three.js, Tailwind CSS, REST APIs, SQLite, Git, GitHub, VS Code, Netlify, Jupyter/Colab familiarity

Concepts: SDLC, Object-Oriented Design, Data Structures, API Integration, Debugging, Data Processing

EDUCATION

California State Polytechnic University, Pomona

B.S. Computer Science, Minor in AI

Pomona, CA

Expected 2028

Pasadena City College

A.S. Applied Science & Natural Science

Pasadena, CA

2026

EXPERIENCE

Election Data Integrity Analyst

FPM Petition Management

Jan 2026 – Present

West Covina, CA

- Process and validate high-volume structured datasets with strict accuracy, compliance, and traceability requirements
- Identify data inconsistencies and apply correction workflows to improve data quality and system reliability
- Work with sensitive records where precision, consistency, and auditability are critical to output quality

Northrop Grumman STEM Internship

STEM Intern & Team Lead

Sep 2024 – Jan 2025

Rio Hondo College, CA

- Developed and tested Python-based software prototypes within the software development lifecycle
- Led a 5-person team researching AI-related system concepts and evaluating technical feasibility
- Presented technical findings, prototype direction, and automation concepts to mentors and stakeholders

Geek Squad Agent & Sales Advisor

Best Buy

Sep 2023 – Jan 2026

CA

- Diagnosed hardware, software, and operating system issues using structured debugging methods
- Translated complex technical problems into clear solutions for non-technical users

PROJECTS

Marketing Campaign Critique Evaluator

Python, Generative AI APIs, RAG Concepts, Model Evaluation, Structured Data

Planned 2026

- Planning an AI-assisted tool that critiques campaigns across audience fit, clarity, offer strength, and conversion risk
- Designing a scoring framework to compare generated feedback against expected campaign evaluation criteria
- Exploring retrieval-based workflows and domain-specific prompts for narrow marketing science tasks

AI Application Prototypes

Python, REST APIs, Generative AI APIs, Structured Data

Ongoing

- Built AI-assisted application prototypes integrating external APIs, structured inputs, and generated outputs
- Designed backend logic to process user inputs, format model responses, and deliver real-time behavior

Developer Portfolio Website

React, Three.js, Tailwind CSS, Netlify

2026

- Developed an interactive portfolio with modular frontend architecture, responsive UI, and optimized visual rendering
- Deployed using Netlify with a production workflow for fast updates and continuous iteration

RESEARCH & PRODUCT INTERESTS

- Interested in small language models, retrieval workflows, model evaluation, and AI systems built for narrow product tasks
- Focused on applying AI to decision support, content evaluation, and measurable business outcomes
- Building toward stronger Python-based ML workflows through notebooks, applied projects, and rapid prototyping
